<b>(a)</b>			
M1:	Takes logs of both sides and shows the addition law		
M1:	Uses the power law, writes $\log_{10} N = \log_{10} a + b \log_{10} T$ and states $m = b$ and $c = \log_{10} a$		
<b>(b)</b>			
M1:	Uses the graph to find either <i>a</i> or <i>b</i> $a = 10^{\text{intercept}}$ or $b = \text{gradient}$ . This would be implied by the sight of $b = 2.3$ or $a = 10^{1.8} \approx 63$		
M1:	Uses the graph to find both a and b $a = 10^{\text{intercept}}$ and $b = \text{gradient}$ . This would be implied by the sight of $b = 2.3$ and $a = 10^{1.8} \approx 63$		
M1: A1:	Uses $T = 3 \Rightarrow N = aT^{b}$ with their <i>a</i> and <i>b</i> . This is implied by an attempt at $63 \times 3^{2.3}$ Accept a number of microbes that are approximately 800. Allow $800 \pm 150$ following correct work.		
	There is an alternative to this using a graphical approach.		
<b>M1</b> :	Finds the value of $\log_{10} T$ from $T=3$ . Accept as $T=3 \Longrightarrow \log_{10} T \approx 0.48$		
<b>M1</b> :	Then using the line of best fit finds the value of $\log_{10} N$ from their "0.48"		
	Accept $\log_{10} N \approx 2.9$		
M1:	Finds the value of N from their value of $\log_{10} N \log_{10} N \approx 2.9 \Rightarrow N = 10^{'2.9'}$		
A1:	Accept a number of microbes that are approximately 800. Allow 800±150 following correct work		
(c)			
M1	For using $N = 1000000$ and stating that $\log_{10} N = 6$		
A1:	Statement to the effect that "we only have information for values of log <i>N</i> between 1.8 and 4.5 so we cannot be certain that the relationship still holds". "We cannot extrapolate with any certainty, we could only interpolate" There is an alternative approach that uses the formula.		
M1:	Use $N = 1000000$ in their $N = 63 \times T^{2.3} \Longrightarrow \log_{10} T = \frac{\log_{10} \left(\frac{1000000}{63}\right)}{2.3} \approx 1.83$ .		
A1:	The reason would be similar to the main scheme as we only have $\log_{10} T$ values from 0 to 1.2. We cannot 'extrapolate' the graph and assume that the model still holds		
(d) B1:	Allow a numerical explanation $T = 1 \Longrightarrow N = a1^b \Longrightarrow N = a$ giving <i>a</i> is the value of <i>N</i> at $T = 1$

<b>(a)</b>	
M1:	Attempts $\frac{dy}{dx} = \frac{\frac{dy}{dt}}{\frac{dx}{dt}}$ and achieves a form $k \frac{\sin 2t}{\sin t}$ Alternatively candidates may apply the
	double angle identity for $\cos 2t$ and achieve a form $k \frac{\sin t \cos t}{\sin t}$
A1:	Scored for a correct answer, either $\frac{\sqrt{3}\sin 2t}{\sin t}$ or $2\sqrt{3}\cos t$
(b)	
M1:	For substituting $t = \frac{2\pi}{3}$ in their $\frac{dy}{dx}$ which must be in terms of t
M1:	Uses the gradient of the normal is the negative reciprocal of the value of $\frac{dy}{dx}$ . This may be
	seen in the equation of $l$ .
B1:	States or uses (in their tangent or normal) that $P = \left(-1, -\frac{\sqrt{3}}{2}\right)$
M1:	Uses their numerical value of $-1/\frac{dy}{dx}$ with their $\left(-1, -\frac{\sqrt{3}}{2}\right)$ to form an equation of the
	normal at P
A1*:	This is a proof and all aspects need to be correct. Correct answer only $2x - 2\sqrt{3}y - 1 = 0$
(c)	
M1:	For substituting $x = 2\cos t$ and $y = \sqrt{3}\cos 2t$ into $2x - 2\sqrt{3}y - 1 = 0$ to produce an equation in <i>t</i> . Alternatively candidates could use $\cos 2t = 2\cos^2 t - 1$ to set up an equation of the form $y = Ax^2 + B$ .
M1:	Uses the identity $\cos 2t = 2\cos^2 t - 1$ to produce a quadratic equation in $\cos t$
	In the alternative method it is for combining their $y = Ax^2 + B$ with $2x - 2\sqrt{3}y - 1 = 0$ to get an equation in just one variable
A1:	For the correct quadratic equation $12\cos^2 t - 4\cos t - 5 = 0$
	Alternatively the equations in x and y are $3x^2 - 2x - 5 = 0$ $12\sqrt{3}y^2 + 4y - 7\sqrt{3} = 0$
M1:	Solves the quadratic equation in $\cos t$ (or x or y) and rejects the value corresponding to P.
M1:	Substitutes their $\cos t = \frac{5}{6}$ or their $t = \arccos\left(\frac{5}{6}\right)$ in $x = 2\cos t$ and $y = \sqrt{3}\cos 2t$
	If a value of x or y has been found it is for finding the other coordinate.
A1:	$Q = \left(\frac{5}{3}, \frac{7}{18}\sqrt{3}\right)$ . Allow $x = \frac{5}{3}, y = \frac{7}{18}\sqrt{3}$ but do not allow decimal equivalents.
