2020 Mark Scheme (DRAFT)

This is a DRAFT mark scheme. It has not been used for marking as this paper did not receive any entries in the series it was scheduled for. It is therefore possible that not all valid approaches to a question may be captured in this version. You should give credit to such responses when marking learner's work.

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

	Question		Answer	Marks	AO	Guidance
1	1 (a)		30 (mod 31) or -1 (mod 31)		1.1	BC No other answer to be accepted
	()					Note: $13 \times 19 = 247 = 7 \times 31 + 30 \equiv 30 \pmod{31}$
				[1]		
	(b)		$13x \equiv 9 \equiv 40 \equiv 71 \equiv \dots \equiv 195$	M1	1.1	Repeatedly adding 31s
			$13\lambda = 9 = 40 = 71 = \dots = 193$	A1	1.1	arriving at a multiple of 13
			so $x \equiv 15 \pmod{31}$ OR $x = 31n + 15$	A1	2.2a	$n \in \mathbb{Z}$ need not be stated
			Alternative method	M1		Mathod for finding regime cal (inverse) of 12 (mod 21) using (a)
			$13 \times 19 \equiv -1 \implies 13 \times (19 \times 13 \times 19) \equiv 1$ so	IVII		Method for finding reciprocal (inverse) of 13 (mod 31) using (a)
			$19 \times 13 \times 19 \equiv 12$ is the reciprocal of 13 (mod 31)			
			Then $12 \times 13x \equiv 12 \times 9$	M1		Multiplication by the reciprocal
			$\Rightarrow x \equiv 15 \pmod{31}$	A1		correct answer
				[3]		

	Question		Answer	Marks	AO	Guidance
2	(a)		$xyh = 1000 \implies h = \frac{1000}{xy}$	B1	3.1b	
			A = xy + 2xh + 2yh	B 1	1.1	soi
			$\begin{pmatrix} 1 & 1 \end{pmatrix}$	M1	2.1	Substitution of h expression from (a) (i)
			$= xy + 2000 \left(\frac{1}{x} + \frac{1}{y} \right)$	A1	1.1	AG shown with supporting working
				[4]		
	(b)	(i)	$\partial A = 2000(-1)$ $\partial A = 2000(-1)$	M1 A1	1.1 1.1	Partially differentiating A w.r.t. x or y; either correct
	(0)	(1)	$\frac{\partial A}{\partial x} = y + 2000 \left(\frac{-1}{x^2}\right) \text{ and } \frac{\partial A}{\partial y} = x + 2000 \left(\frac{-1}{y^2}\right)$	B1	1.1	2^{nd} correct: FT 1^{st} , with $x \leftrightarrow y$
			Both p.d.s set to zero and solving	M1	2.1	$x^2y = xy^2 = 2000$
			$x = y = 10 \times 2^{\frac{1}{3}}$	A1	1.1	Both correct
				[5]		
		(ii)	Substg. x, y back into formula for A; $300 \times 2^{\frac{2}{3}}$	M1 A1	1.1 1.1	Any exact equivalent e.g. $150 \times 2^{\frac{5}{3}}$, $75 \times 2^{\frac{8}{3}}$ or awrt 476 BC
3	(a)		13 divides each pair of digits of <i>N</i> (26, 13, 26, 52)	[2] B1	2.4	Or applying a standard divisibility test
3	(a)		13 divides each pair of digits of <i>W</i> (20, 13, 20, 32)	[1]	2.4	Or apprying a standard divisionity test
	(b)		$4 \mid 52$ (the final two digits of N) $\Rightarrow 4 \mid N$	B1	1.1	Applying these two divisibility tests
			9 digit-sum of $N (= 27) \Rightarrow 9 N$	B 1	1.1	
			Since $hcf(4, 9) = 1, 4 \times 9 = 36 \mid N$	B1	2.4	Must explain that 4, 9 are co-prime as well as state the conclusion
				[3]		
	(c)		By Euclid's Lemma,	M1	2.4	M for stating "Euclid's Lemma" (or full description of its result)
			$13 \mid 36 \times 725907$ and $hcf(13, 36) = 1$			
			\Rightarrow 13 725 907	A1	2.2a	Clear outline of necessary conditions
				[2]		

(Question							Ansv	ver		Marks	AO	Guidance
4	(a)		×14	2	4	6	8	10	12		B1	1.1	For any two lines (Rs or Cs) correct
			2	4	8	12	2	6	10		B1	1.1	For at least two Rs and two Cs correct
			4	8	2	10		12	6		B1	1.1	For LSP applying to complete table
			6	12	10	8	6	4	2		D1	1.1	To Lor applying to complete table
			8	2	4	6	8	10	12		B1	1.1	For symmetry about main diagonal
			10	6	12	4	10	2	8				(Must be fully correct for all 4 marks)
			12	10	6	2	12	8	4				(Must be fully correct for all 4 marks)
											[4]		
	(b)					o otł	ner el	eme	nts ap	pear in the table	B 1	2.4	Don't accept "closed, from table" only
			Identity is 8 Inverses: 6 is self-inverse								B1	2.2a	
									10 -	d 12-1 10	B1	1.2	Any clear indication of inverses (not just statement they exist)
							2; 10)	= 12 a	nd $12^{-1} = 10$	B1	2.5	That is, (2, 4) and (10, 12) are inverse-pairs
			(Hen	ce a	grouj	p)					[4]		Associativity and conclusion not required
	(c)	(i)	{8, 6	}	{8, ′	2, 4}					B1 B1	2.2a 1.1	One correct; both (and no extras). Ignore {8} and G
	(-)		(-,-	,	(-,	, ,					[2]		(
		(ii)	10, 1	12							B1 B1	1.1 1.1	One correct; both (and no extras)
											[2]		
5	(a)		Com	plem	entar	y So	olutio	n is	$V_n = 1$	$A \times 2^n$	B1	1.2	
			For F	artic	ular	Solu	tion,	try	$V_n = a$	an + b	M1	1.1a	Allow $V_n = an$ for method mark
			Then	V_{n+1}	$a_1 = 2$	$2V_n$	+ n	$\Rightarrow a$	n + (a	(a+b) = 2an + 2b + n	A1	1.1	Substitution and comparing of coefficients
			Com	parin	g co	effici	ients	: a =	2a +	1 and $a + b = 2b$	M1	1.1	
			$\Rightarrow a$	= <i>b</i>	= -1						A1	1.1	
			Gene	ral S	oluti	on is	s thus	V_n	$=A \times$	$2^n - n - 1$	B1	1.1	FT GS = CS + PS provided CS has one arbitrary constant and PS has none (and is a polynomial)
											[6]		

	Questi	on	Answer	Marks	AO	Guidance
5	(b)		$V_1 = 8 \Rightarrow A = 5 \text{ so } V_n = 5 \times 2^n - n - 1$	M1	3.1a	soi (or BC)
			So $V_{20} = 5242859$	A1 [2]	1.1	accept exact value only.
6	(a)		$\mathbf{a} \times \mathbf{b} = -14\mathbf{i} + 2\mathbf{j} + 10\mathbf{k}$	B1	1.1	A correct vector product (possibly BC)
			Use of formula Area $\Delta = \frac{1}{2} \mathbf{a} \times \mathbf{b} $	M1	1.1	Including an attempt at a vector product
			Area $\triangle OAB = 5\sqrt{3}$	A1	1.1	Accept alternative exact equivalents (e.g. $\sqrt{75}$)
				[3]		
	(b)		$(\mathbf{r} - \mathbf{a}) \times (\mathbf{b} - \mathbf{a}) = 0$ is the line through A and B	M1	2.2a	
	(0)		so $\mathbf{c} = \mathbf{a} + \lambda(\mathbf{b} - \mathbf{a})$ or $\mathbf{c} = (1 - \lambda)\mathbf{a} + \lambda\mathbf{b}$	A1	3.1a	
			Area $\triangle OAC = \frac{1}{2} \mathbf{a} \times \mathbf{c} = \frac{1}{2} (1 - \lambda)\mathbf{a} \times \mathbf{a} + \lambda \mathbf{a} \times \mathbf{b} $	M1	2.1	From this point on, work may appear
				N/1	2.1-	with numerical equivalent set-out
			$= \frac{1}{2} 0 + \lambda \mathbf{a} \times \mathbf{b} $	M1	3.1a	Use of $\mathbf{a} \times \mathbf{a} = 0$
			Area $\triangle OAC = \frac{1}{2}$ Area $\triangle OAB \implies \lambda = \pm \frac{1}{2}$	A1	1.1	
			giving $\mathbf{c} = -\mathbf{i} + 3\mathbf{j} - 2\mathbf{k}$ or $\mathbf{c} = 3\mathbf{i} + \mathbf{j} + 4\mathbf{k}$	A1	2.1	
			Alternative method	70.4		
			C is on the line AB Common "base" OA means that C is either the	B1 M1		
			internal or the external bisector of AB	A1		(For half the "height")
			internal of the external discetor of 71B	AI		(For hair the height)
				M1		At least one must be attempted
			i.e. $\mathbf{c} = \frac{1}{2} (\mathbf{a} + \mathbf{b})$ or $\frac{1}{2} (3\mathbf{a} - \mathbf{b})$	A1		
			giving $\mathbf{c} = -\mathbf{i} + 3\mathbf{j} - 2\mathbf{k}$ or $\mathbf{c} = 3\mathbf{i} + \mathbf{j} + 4\mathbf{k}$	A1		Both correct
				[6]		

Question		Answer	Marks	AO	Guidance
7 (a)	(i)	E.g. $T_0 = 100000$ is the initial population as given $T_{k+1} = (1-r)T_k$ because a death-rate of r means that 1	B1	1.1	
		-r of the population is left after each week.	B1	3.3	
		$0 \le k \le 12$ because the model given is only valid for twelve weeks.	B1	2.1	
			[3]		
	(ii)	$T_{12} = a^{12} T_0$	M1	3.1b	a = r or $1 - r$
		$1 - r = \sqrt[12]{0.00355} = 0.62496 \Rightarrow r = 0.375 \text{ to 3s.f.}$	A1	1.1	AG
			[2]		
(b)	(i)	After 16 weeks, the number of frogs is			Allow use of ' T_{16} '.
		$0.62496^{16} \times 100000 = 54.154$	B1	3.5c	Or, starting again $0.62496^4 \times 355$
		So $54.154 \times p \ge 30$	M1	3.1b	For 'their population' $\times p \ge 30$
		$\Rightarrow p \ge \frac{30}{54.154} = 0.5539 = 0.554 \text{ to } 3 \text{ sf}$	A1	1.1	
			[3]		
	(ii)	E.g. The same weekly death-rate factor continues unchanged. The females will all lay eggs. Tadpoles instantly change to frogs and lay eggs at exactly the same time.	B1 [1]	3.3	
(c)		E.g. 30 surviving females would produce 75000 eggs, so the population is smaller than it was to start with, so each 'round' will result in smaller and smaller populations.	B1	3.5a	No greater detail of analysis is required beyond "they would appear to be dying out so the figure of 30 in the model is not a good one"
